

USM 140 / USM 240 / USM 360 Automatic Stapling Machine

The USM series models are clearly the flagships of staplers. They feature the highest variability and an enormous stapling capacity of up to 250 sheets (80g plain paper). Depending on the model, stapling with up to 6 stapling heads is possible. The spacing can be freely selected within the range of 40-360 mm. STAGO-typical robust design for continuous daily use. An active clencher matrix and an infinitely variable stapling thickness adjustment guarantee a perfect stapling result. Due to very short conversion times between different usage scenarios (flat-, saddle stapler, flat-, loop staple, different dimensions, etc.), the USM series is economical on short runs.

- up to 4 stapling heads
- continuously variable staple distance in the range 40 - 240 mm
- for flat and saddle stapling
- for flat and loop staples
- capable of stapling printed matter up to 25mm thick
- precise adjustment of the booklet thickness
- active staple bender
